what is RoboCare?

RoboCare is a tunisian company founded in 2020 by Dr. Imen Hbiri. RoboCare provides digital monitoring systems that prevent late-stage plant disease detection, slow disease spread, and reduce pesticide use. Using spectral technology and AI, we offer early-stage plant disease detection, allowing farmers to precisely monitor crops and manage stress factors. RoboCare's approach helps optimize pesticide, water, and fertilizer use, leading to improved land efficiency and reduced chemical application.

[Why RoboCare is Different](#)

At RoboCare, our strength comes from the integration of agronomy, data science, and cutting-edge technology.

With years of hands-on field experience and R&D, we've positioned ourselves as a leading digital transformation partner in agriculture, tailored specifically for the MENA region.

Our Managed Services deliver an end-to-end suite of intelligent tools that:

Maximize crop productivity

Enhance sustainability through precision agriculture

Mitigate risks and reduce operational costs

Empower data-driven decision-making at every level

What truly sets RoboCare apart is our ability to translate complex agricultural data into actionable insights — built by agronomists, powered by data, and delivered through intuitive technology.

We're not just building digital solutions; we're transforming agriculture — one field at a time.

[RoboCare](#)

RoboCare is A monitoring management platform for farms:

Providing agronomic recommendations for plant needs optimization and early stress detection, using Satellites, drones, OT and Farmer expertise.

Our Solution

Olive Care

Enhance your olive yields by up to 10%, optimize water usage, and reduce your environmental impact.

More details

Wheat Care

Maximize wheat productivity, ensure sustainable sourcing, and confidently track your carbon footprint.

More details

Citrus Care

Boost citrus health, increase crop resilience, and support soil health while achieving higher profits.

More details

Potato Care

Improve potato yields, enhance soil quality, and foster sustainable farming practices for long-term success.

More details

Our Impact

Productivity

Crop Quality

Quintity

Increase net

Cost saving

Water,Fertilizers,

Pesticides,Energy

Healthier vegetation

Pesticides & Fertilizers use reduction

Water use optimization

Crop-Care:

We provide a comprehensive, turnkey solution, offering a fully equipped UAV with integrated spectral and thermal cameras, ready to deploy straight out of the box.

Our Technology

See the unseen

The limitations of visual inspection often lead to delayed detection of crop stress. By the time pests become visible to the naked eye, the infection may have already established itself, potentially causing significant yield loss. Robocare leverages hyperspectral imaging, a sophisticated technology that captures invisible reflected signals beyond the near-infrared spectrum. This enables us to generate unique plant signatures that differentiate between healthy and stressed crops. By identifying stress early, we can alert farmers and facilitate timely interventions before the infection becomes uncontrollable.

How it Works

Remote Sensing

A system that precisely detects invisible stress in plants through advanced spectral imaging.

Artificial Intelligence

An AI-powered app that monitors plant health and offers tailored recommendations.

Agronomic Modeling

A sophisticated digital tool for farmers to efficiently optimize their agricultural practices.

Collecting data

Harnessing the latest in drone, airplane, and satellite-based remote sensing imagery to survey your fields, supplemented by meticulously curated historical climate and weather records.

Applying analysis

We conduct precise analyses tailored to crops, varieties, and regions using advanced models and AI, delivering detailed insights into crop technology and physiological traits.

Creating maps

Our analysis produces detailed maps identifying agronomic issues such as nutrient deficiencies, disease infections, and pest/weed infestations, enabling targeted interventions.

Reporting

We provide personalized and meticulously crafted recommendations for the optimum management and treatment of your land and crops, ensuring precise and effective solutions.
